## NOTES

- 1.The above data, except for special instructions, are measured at TA = 25°C, humidity <75%, input nominal voltage 230Vac and output rated load
- 2.Ripple and noise are measured according to the application circuit of this manual, using a 300mm twisted pair and in the case of a bandwidth of 20MHz
- 3.The parts in the system is considered as a component, need to combine the terminal equipment for electromagnetic compatibility related confirmation.

### NOTES

- The output filter capacitance C4 is the electrolytic capacitor. It is recommended to use the high frequency low resistance electrolytic capacitance, the capacity and the current of the flow. Please refer to the technical specifications provided by the manufacturers. Capacitance pressure reduction is greater than 80%. The C5 is to remove the high frequency noise. D1 is recommended for the TVS tube to protect the rear circuit (when the module is abnormal).
- The dashed box is an EMC filter that is accessible for higher EMC requirements, which can be omitted while general applications
- We has formed a filter for C1, C2, C3 and NF ,for the customer to use, the model is FA01.
